Education

University of Waterloo

Computer Science, Bachelor of Mathematics (Co-op, 2A, 3.5/4.0 GPA)

August 2025 – Present

Waterloo, Ontario

Experience

Incoming Undergraduate Research Assistant

University of Waterloo

September 2026 – Present

Waterloo, Ontario

- Researching how AI agents can better implement compiler optimizations in LLVM

Software Developer Co-op

SeedLift Solutions

June 2026 – September 2026

Toronto, Ontario (Remote)

- Set up, maintained and extended an always-on Nous Research Hermes agent on Railway, integrated with Slack to manage ClickUp tasks, send pre-call prospect briefs and create post-call summaries
- Created a secure Railway webhook to automatically deploy Vercel pages, triggered by HeyReach and Instantly LinkedIn replies, saving 30+ minutes of manual work needed for prospect demoing
- Refactored the agency's context OS (an AI knowledge base that powers agents) with Claude Code and Codex to improve agent performance and reliability
- Engineered multiple web scrapers for a client to discover and classify brands, saving 20+ hours of manual work
- Converted 20+ deterministic prompts into scripts, eliminating unnecessary LLM calls and reducing token usage

Technical Skills

Languages: JavaScript/TypeScript, Python, Racket, Rust, C, C++, HTML/CSS, Bash, SQL, Dart

Frameworks: Node.js, Svelte, Flutter, React/React Native, TailwindCSS, Tauri

Developer Tools: Git, GitHub, Postman, Figma, Docker

Cloud Platforms: Google Cloud Platform (GCP), Amazon Web Services (AWS), Railway

Projects

Qration | Svelte, TypeScript, GitHub, Rust, SQLite, HTML/CSS

December 2025 – Present

- Developed and officially published a desktop + mobile application that aggregates RSS, Atom and YouTube feeds into one place, designed to solve a personal problem of endless scrolling on social media platforms
- Built the app using the Svelte frontend framework and the Tauri Rust framework for easy cross-platform support
- Used TailwindCSS to create a responsive UI that's easy to navigate on both desktop and mobile platforms
- Created a Rust script to parse through feeds and automate YouTube video transcript retrieval
- Designed a shared SQL schema between different feed types for a local SQLite database to enable offline reading

DocTalk | Svelte, GitHub, WebSocket, Postman

December 2024 – December 2024

- Created a real-time chat application to help solve the issue of late doctor response times at a hackathon
- Led the development of the web app with 3 other developers in under 12 hours using the Svelte framework
- Implemented WebSocket functionality to send messages between accounts and debugged with Postman
- Won Best Pitch Award at the hackathon out of 50+ teams

Resistor Decoder | Svelte, JavaScript, HTML/CSS, Figma, Git

August 2022 – September 2022

- Developed a web application using the Svelte framework to decode colours on resistors
- Designed the UI/UX with Figma and hosted the website online with GitHub Pages
- Revamped after two years, applying knowledge gained from more experience with CSS and SVG

Lightning Bot | TypeScript, SQLite, GCP, Bash

June 2019 – May 2022

- Developed a Discord bot with the discord.js framework with 500+ users in 80+ servers and maintained for 3 years
- Used SQLite and Sequelize for the database system which held data for polls and other features
- Implemented 18 different commands for users to interface with, including a poll system and pagination features
- Created a custom command handler and Bash script to automatically register slash commands on the Discord API
- Hosted on a Debian Compute Engine on the Google Cloud Platform (GCP) using pm2 to manage the process

Certifications

[PCAP-31-03] PCAP™

Python Certified Associate Programmer

August 2024

Python Developer
